**SECRET DOUBLE OCTOPUS**

Passwordless Means
ZeroPassword™

Anything more isn't passwordless — and doesn't do what you need it to

Doing away with passwords makes your company safer and more productive — once you completely eliminate them. Partial passwordless solutions like Windows Hello For Business, Okta FastPass, and Duo only work with Windows login and SSO-compatible apps, but that's only the tip of the iceberg for most enterprises. Users still need passwords to access everything else.

Partial passwordless solutions leave the heavy lifting of recoding incompatible services to in-house app owners and IT teams, and delays or completely prevents achieving company-wide passwordless goals.

Octopus passwordless authentication changes all that. We work with everything in your enterprise, out-of-the-box, to make you 100% passwordless, even with password-based apps and network services. Octopus is compatible with your infrastructure, so you can stop phishing, avoid friction, and get ahead of Zero-trust — all in a fraction of the time and at a fraction of the cost.

Octopus ZeroPassword™
SECRET DOUBLE OCTOPUS

Cloud/ Mobile SSO | Windows Desktop

Custom & Legacy Apps

| Mac Desktop | Remote VPN | Remote RDP | Remote VDI | Secure Shell | Self-Managed On-prem | Directory joined | Stand -alone | Shared Accounts | Industrial/ Air Gap | Eliminates all user passwords |

Others	Complete Passwordless?	SDO
✗ No, workers still use directory passwords to access apps that aren't compatible with SSO, and for fallback when authenticators get damaged or lost.		✓ Yes, with ZeroPassword™ technology users never know, type, or expose directory passwords.
	Great user experience?	
✗ Incomplete use case coverage leaves workers frustrated with multiple login workflows and stuck with passwords.		✓ 100% coverage - One passwordless workflow for everything in the enterprise, including legacy password apps.
	Security effectiveness?	
✗ Attackers and pen-testers shift their focus to unprotected assets for initial access and lateral movement.		✓ No assets unprotected enterprise-wide.
	Compatible?	
✗ Partial solutions leave IT with the heavy lift of replacing, reconfiguring, and recoding essential but incompatible apps and network services to meet their integration requirement.		✓ 100% compatible out of the box - No redesign required. Hours to start, weeks to achieve enterprise-wide coverage.

Octopus delivers *ZeroPassword™* enterprise-wide

With ZeroPasswords™ technology from the Octopus, IT delivers a frictionless, passwordless MFA for every user accessing everything in the enterprise that pays quantifiable business dividends.
