SECRET DOUBLE OCTOPUS

GET MORE FROM WINDOWS HELLO 😊 ⊞

Extend Windows Hello Across Your Entire Enterprise

Octopus Booster brings Microsoft's passwordless access to any system— legacy, on-prem, network services, SaaS, and everything in between.

Windows Hello is a great start, but leaves too many gaps.

Windows Hello for Business (WHfB) offers a convenient and secure way to access Windows machines and Entra ID compatible SaaS apps without typing passwords.

The issue? It only supports a fraction of your environment.

For all other resources, workers are forced to continue typing in their directory passwords, creating friction and phishing risks.

|	
✓ Windows machines	✗ On-prem & legacy apps
✓ SSO & SaaS	✗ Remote access & network services
✗ Non-windows	
✗ Shared accounts	✗ Fallback when authenticators fail or go missing

Octopus Booster for WHfB

- ✓ **Easy login using integrated Windows biometrics**

- ✓ **Unified experience across all enterprise use-cases**

- ✓ **ZeroPassword™ technology eliminates all user-managed passwords**

- ✓ **Works even with password-based apps without a redesign**

Octopus Booster for Windows Hello

Extend WHfB across 100% of your enterprise

With built-in support for WHfB, use Octopus to expand passwordless workflows to every corner of your enterprise— including network services and systems still tied to passwords.

Covered by **WHfB**   Extended by **Octopus Booster**

SSO   Windows

VPN   RDP   VDI

SSH   On-prem   Legacy

Shared Accounts   Air Gap   Custom

✓ **Zero added authenticators, use your existing WHfB setup**

✓ **Fully compatible with your apps and infrastructure**

Improve security
Compliance-ready, phishing-resistant authentication for every login

Simplify access
Unified passwordless experience, everywhere. Avoid login friction or MFA fatigue

Lower IT operating costs
No password management overhead or added MFA costs

---

1. **Authenticate**
Users log in using WHfB

Biometric   Pin   fido HW key

2. **Extend**
Octopus extends secure access to any login scenario not natively supported by WHfB.

3. **Access**
Users get seamless, passwordless access to all apps and services.

4. **Impact**
Organizations gain phishing-resistant security, with centralized control and reduced IT overhead.

How it works

Octopus' patented ZeroPassword™ technology replaces all directory & legacy credentials with machine-generated ephemeral tokens that no one ever knows. So users never create, remember, type, or fall back to passwords anywhere.

Because our token-based approach is compatible with your existing applications and directory infrastructure, no costly redesign is required and enterprise-wide deployment happens fast.

SECRET DOUBLE OCTOPUS

At Secret Double Octopus, we believe authentication should be stronger, simpler, and completely password-free. Our patented ZeroPassword™ technology eliminates passwords even from legacy and on-prem systems, delivering unmatched security and user experience at scale. **Let's redefine authentication.**
